

My Fire Rules

Incident Validation

- Validate **any field** against **any other field** in the Incident Report – even against custom tabs!
- Option to prevent marking “Report Complete” if “Fatal” errors exist in Report
- **Error Levels** are **user controlled** and **Error Messages** are **User Defined** (& in plain English)
- Incident Validation **is your Answer!**

For a free evaluation of your data, download “The Validator” on our download page at: www.MyFireRules.com.

"I just had to tell you that my 'former report reviewers' LOVE you and your product (My Fire Rules)! The amount of time that we spend double-checking the data quality of our FireRMS reports has been dramatically reduced since we implemented My Fire Rules and have never been happier with a software purchase, thanks!"

Brent, NFIRS Data Administrator, Woodinville Fire and Life Safety, WA

"My Fire Rules has helped our reporting integrity tremendously!" John, Deputy Chief, Albemarle County, Charlottesville, VA

"The costs and maintenance fees to purchase the program have more than paid for itself in the gains in productivity My Fire Rules has given our Q/A staff. The accuracy and timely filing of our reports has improved dramatically. We have been extremely pleased with the program's ease of operation, accuracy, and costs."

Mike, Lieutenant, Amarillo Fire Department, TX
