

Press Release: The Rules Guys & CrewSense

The Rules Guys™ release an automated Roster Integration between RescueNet™ FireRMS and CrewSense.

Oct 8th, 2019

The Rules Guys LLC, a leader in rules-driven solutions for the Fire Service, enhances Fire Department efficiency with the roll-out of **MFR CrewSense Roster Integration** today at El Cerrito/Kensington Fire Department (El Cerrito, CA). This interface program uses the CrewSense API to automate the sending of their Roster Data from CrewSense to their RescueNet FireRMS database.

“Using our public API, The Rules Guys have been able to write an integration from CrewSense to RescueNet FireRMS Roster.” Says Brandon Rigaud Senior Project Manager at CrewSense. “This allows scheduling and roster data to freely flow from CrewSense, into RescueNet FireRMS and will allow users to rely on Roster Reports in RescueNet FireRMS without having to duplicate the data already entered into CrewSense thereby reducing the chance for errors.” Rigaud said.

“The Rules Guys was born in 2006 out of a need to allow Fire Agencies to enforce local data control based on data driven rules. With our understanding of fire service data, SQL Server, and now web-API technology, The Rules Guys have been able to bring their ‘simple-to-implement and easy-to-use’ philosophy to the interface with CrewSense. We believe this will fill an obvious void and be the missing link that CrewSense & RescueNet FireRMS Roster users have been waiting for.”, said Mat Jackmond, Co-Founder and CEO of The Rules Guys LLC
